L.S.L.

Louisiana State Lottery Company.

Incorporated by the Legislature in 1893 for the purpose of raising money for the benefit of the State of Louisiana.

THE DRAWINGS TAKE PLACE WEEKLY ON THURSDAY EVENING, AT 8 O'CLOCK, AT THE NEW ORLEANS HOTEL.

THE GRAND PRIZE OF \$100,000 IS DRAWN ONCE A YEAR, AND THE SECOND PRIZE OF \$50,000 ONCE A YEAR.

SCIENCE AND PROGRESS.

PRACTICAL INFORMATION ABOUT ART, SCIENCE AND MECHANICS.

A New Kind of Current Conductor for Electric Railway Purposes Now on Trial on One of the New York Elevated Railroads.

A new departure in current conductors for electric railway purposes has been taken by the Electric Railway Company of New York.

The new kind of conductor is shown in the accompanying cut, reproduced from The Electric Railway.

The conductor, which is supported by heavy insulated cast iron brackets, runs along outside the outer guard rail of each track. It is of round iron, three inches in diameter, and is surrounded by, and in perfect electrical contact with, a bar of phosphor bronze three-eighths of an inch thick by one inch wide. This bar takes all the wear from the contact apparatus, and will retain a polished surface under all circumstances. The supporting bracket is made in two parts, as may be seen in the illustration, and has a grip sufficient to prevent all possibility of displacement of the conductor. The conductor is elevated a considerable distance from the track, and the supporting brackets are well insulated, so that the chances of loss of electric energy through leakage are reduced to a minimum. The difference in cost of iron and copper admits of the greatly increased conductivity of copper, giving the same conductivity at much less expense.

Refilling of Old Coal Mines.

An ingenious article that has lately been successfully put in practice at Shenandoah by the mining company of New York.

The article, which is a description of a colliery, for refilling the excavations from which coal has been taken out, is worthy of mention, since it is desirable that it should be refilled, and the coal should be used.

The method is both simple and effective, and prevents the caving in of the earth above, and the consequent loss of valuable property, which has not been infrequently in the mining towns of the anthracite region. Besides, the valuable pieces of pure coal, which for many years has been customary to leave in the mines to prevent falling in of the roof, can now be taken out without fear.

At present the two acres beneath the colliery of Shenandoah, from which the coal had been mined, have again solidly refilled with the coal dirt which used to be piled up in the excavations from the mine.

The Great Artesian Well District.

The James River valley, Dakota, is claimed to be the greatest artesian well district known.

A comparison with other districts makes it appear that for pressure and area over which they are found, this valley far surpasses them all. There are some fine wells in France, but they are found only in favorable localities. Some of the wells in France are of large bore, but in none does the pressure equal any one of the fifty wells in the James valley.

According to the Scientific American, Western California, from San Diego to near the northern boundary of the state, is proving itself to be a great artesian district, and strong pressure is found only in limited areas. North of Broad, most or partly is put in as soon as the burner is lighted, without waiting until the water is thoroughly warm. It is impossible to obtain good results after this fashion, and does not take nearly as long to heat a gasolene oven as it does that of a wood or coal stove, but it is no less important that it should be well heated.

The New Commissioner of Patents.

Mr. Charles E. Mitchell, the new commissioner of patents, is about 50 years of age and a native of Bristol, Conn. He is a graduate of Brown university. He has occupied several important public positions, among them that of state senator, but for the most part his energies have been devoted to the practice of patent law.

Outrigger Farming in California.

With a view to experiments in outrigger farming in California, in 1898 some birds were imported from Cape Town, and in 1898-9 further shipments were forwarded from Natal.

The last was made by Mr. Cawston, who landed forty-two birds out of fifty-two. They were then taken to Mr. Cawston's ostrich farm in Los Angeles, Cal., where our illustration shows them. Mr. Cawston has been successful in raising a large number of young birds—those in the illustration being one and two weeks old. The climate and the country are just what is needed for the birds, and the experiment also appears to be fairly profitable, as from one small bird and two hens he produced—principally by means of incubation—eighteen chicks in one season.

Notes and News.

A movement is on foot for the founding of a textile technical school. Large textile manufacturers in the project.

A weekly journal, started at Fremont, O., under the name Journal of Oil and Gas, proposes to be the recognized authority on gas and oil matters.

The returns for accidents on the railways of the United Kingdom during the year 1898 are as follows: Eleven passengers were killed and 924 injured, as against 25 passengers killed and 635 injured in 1897.

Professor Paul d'Uze, whoever he is, says he can cause a thunderstorm and a fall of rain in any district on two hours' notice, and that he can have the shower stop in fifteen minutes or continue half a day.

Mr. Adolph A. Sander has made a special study of the great epidemic disease, the cholera, and he has found that the great cholera epidemic of the year 1817, it is a little early yet to begin laying in coal.

A negro in Rankin county, Miss., who had stolen a mule, was given the option of going to the penitentiary or receiving a hundred lashes on the back. He chose the latter, taking the punishment like a stoic.

In the quiet old English church of Capel-Ferne, near Dover, there is no provision made for lighting it at night, and at the evening service those who attend are in the habit of bringing candles and lamps along with them.

To remove paint—Sit on it.—Portland Times.

ALL AROUND THE HOUSE.

Dr. C. V. Riley Tells How to Destroy the Buffalo Moth at Home.

One of the greatest insect pests of the household, and the despair of good housekeepers, is the so-called buffalo moth, which first began to excite complaints in this country in 1874, being found about that time and soon afterward at various points in New York, New Jersey and Massachusetts. Since then it has extended as far west as Illinois and as far north as Washington. Besides commonly recommended for this insect are not only the most energetic measures will completely rid it of the pest, and in complete riddance is the only hope, as in a year a very few individuals will increase to such great damage. At house cleaning time, then, as many rooms should be barred at once as possible, and the housekeeper should go carefully over the closets, drawers and trunks, and see that the atomizer charged with benzine should puff the liquid into all the floor cracks and under the beds boards until every crevice has been reached.

The carpets themselves, after thorough beating, should be lightly sprayed with the same substance, which will quickly envelop the most energetic measures will completely rid it of the pest, and in complete riddance is the only hope, as in a year a very few individuals will increase to such great damage. At house cleaning time, then, as many rooms should be barred at once as possible, and the housekeeper should go carefully over the closets, drawers and trunks, and see that the atomizer charged with benzine should puff the liquid into all the floor cracks and under the beds boards until every crevice has been reached.
